

SESSION DESCRIPTION

B2 UCCRN Urban Planning and Design Lab Workshop

Date: Wednesday, 26 June 2019

Time: 16:00-17:30

Rooms: S01-02

Language: English

Contact: Christian Braneon

E-mail/web: cvb2121@columbia.edu <http://uccrn.org/>

Organized by: UCCRN

OBJECTIVE

Enabling transformative climate action in cities requires expanding on the traditional influence and capabilities of urban planning and urban design. Evidence-based strategies demonstrate how transitioning to low-carbon, resource-efficient urban form and climate-resilient natural systems will configure dynamic, desirable and healthy communities.

The UCCRN Urban Planning and Design Lab Session will work with representatives from cities to integrate and scale up mitigation and adaptation principles by reducing energy consumption in the built environment, strengthening community adaptability to climate change, and enhancing human comfort and quality of life. Through the participatory engagement of the City Teams, the Lab will demonstrate that through energy-efficient urban planning and urban design, compact urban districts can work synergistically with high-performance construction and landscape configuration to create interconnected, protective, and attractive urban areas that provide mitigation, adaptation, resilience, and transformation.

We will conduct a series of interactive exercises with city stakeholder participants. The approach to urban climate intervention will follow a four-phase strategy: Climate analysis mapping, public space evaluation, planning and design intervention, and post-intervention evaluation. This session will test and apply ARC3.2 research with the goal of extending the approach to configure or retrofit compact, mixed-use eco-districts. Building massing, urban ventilation, solar impacts, green infrastructure and anthropogenic factors will shape the outcomes.

METHODOLOGY

Facilitator(s) *Christian Braneon, Remote Sensing Specialist, UCCRN New York, USA*

Jeffrey Raven, Director, UCCRN, New York, USA

Mattia Leone, Assistant Professor, Department of Architecture, University of Naples, Naples, Italy

16:00 - 16:10 The facilitators will provide a short presentation on the Urban Climate Change Research Network and ARC3.2

Christian Braneon, Remote Sensing Specialist, UCCRN, New York, USA

16:10 – 16:30 The session will begin with a presentation on four evidence-based urban form and urban function Climate Factors and explore how they enable transformative climate action in cities by expanding on the traditional influence and capabilities of urban planning and urban design.

Jeffrey Raven, Director, UCCRN, New York, USA

16:30 - 17:15 Teams of participants will be drawn from city government and stakeholders from each city participating in the session. The teams will interact and learn from each other's experiences in their on-going climate change programs and will together develop perspectives on taking their efforts to the next level of engagement and implementation.

17:10 - 17:30 Summary of team break-out sessions, group discussion, and conclusions

With thanks to: *Cynthia Rosenzweig, Senior Research Scientist, UCCRN, New York, United States*
