# Planning for Resilient Infrastructure and Informality

- **Do more with less.**
- **Be adaptive and flexible.**
- **Be responsive to local context, global trends, and the needs of communities.**
- **Keep up with or plan for growth appropriately.**
- **Work with others, including communities, civil society, private sector, to plan and implement interventions and projects for service delivery.**
- **Think across different sectors and look for multiple benefits.**
- **Learn and improve processes and interventions over time.**

## Thank You:
